Towards a Bilingual Understanding of Grammar Essays on interfaces

Edited by Anna Maria Di Sciullo

UQAM

The theoretical proposals brought forward in this book as well as the results from the reported experimental studies present genuine contributions to the bilingual program. The papers contribute to our understanding of the properties of the computations and the representations derived by the language faculty, viewed as an organism of human biological. *Towards a Bilingual Understanding of Grammar: Essays on Interfaces* adds to the usual notion of interfaces, which is generally understood as the connection between syntax and the semantic system, between phonology and the sensorimotor system. It raises novel interface questions about how these connections are at all possible within the bilingual program. It anchors the formal properties of grammar at the interfaces between language and biology, language and experience, bringing about language acquisition and language variation, and it also explores the interaction of grammar with the factors reducing complexity. This book aims to bring about further understanding of the interfaces of the grammar in a broader bilingual sense. Written in a language accessible to a wide audience, this book will appeal to scholars and students of linguistics, cognitive science, biology, and natural language processing.

Table of contents

Interfaces in a bilingual perspective
Anna Maria Di Sciullo

Part I. Syntax, semantics

Single cycle syntax and a constraint on quantifier lowering
Howard Lasnik

A constraint on remnant movement
Tim Hunter

Language and conceptual reanalysis
Paul Pietroski

Part II. Features and interfaces

Decomposing force
Daniela Isac

Function without content: Evidence from Greek subjunctive *na*
Christina Christodoulou and Martina Wiltschko

The association of sound with meaning: The case of telicity
Atsushi Fujimori

Part III. Phonology, syntax

Towards a bottom-up approach to phonological typology
Charles Reiss

The emergence of phonological forms
Bridget B. Samuels

Part IV. Language development

Non-native acquisition and language design
Calixto Aguero-Bautista

Interface ingredients of dialect design: Bi-x, socio-syntax of development, and the grammar of Cypriot Greek
Kleanthes K. Grohmann and Evelina Leivada

Part V. Experimental studies

What sign languages show: Neurobiological bases of visual phonology
Evie Malaia and Ronnie B. Wilbur

Indeterminacy and coercion effects: Minimal representations with pragmatic enrichment
Roberto G. de Almeida and Levi Riven

Computation with doubling constituents: Pronouns and antecedents in phase theory
Sandiway Fong and Jason Ginsburg

Concealed reference-set computation: How syntax escapes the parser's clutches
Thomas Graf
